VideoPoet is a large language model developed by Google Research in 2023 for video making. [1] [2][3][4] It can be asked to animate still images. [5] The model accepts text, images, and videos as inputs, with a program to add feature for any input to any format generated content. [4] VideoPoet was publicly announced on December 19, 2023. [1] It uses an autoregressive language model.
